Power Apps Portals

**Create low code, personalised portals and allow internal and external users to connect securely to your Dynamics 356 and Azure data and services.**

Enhance security and governance, democratise access to your data and create highly personalised experiences with Microsoft Power Apps Portals
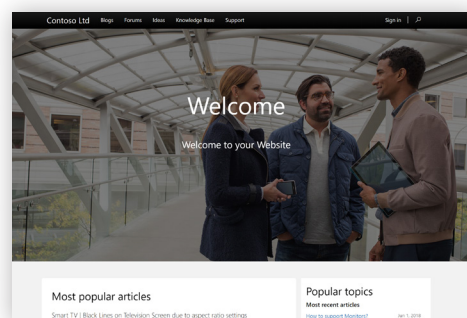

Customer Support Portal

Xpedition's Customer Support Portal, underpinned by Microsoft Power Apps Portals, gives customers 24/7 access to their own virtual helpdesk, where they can raise support tickets, download resources and guides, troubleshoot problems and view relevant dashboards.
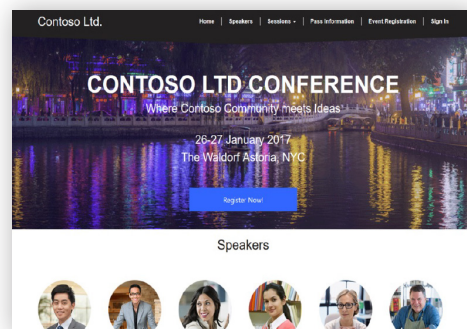

Client Services Portal

The same solution is used for Client Services Portals. Clients are provided with a secure, fully branded and highly personalised support area where they can view their account details, raise a new case, update personal details and download resources.

Employee Portal

Power Apps Portals can also be used to share data internally via intranet hubs. Employees log in to their portal (with or without a Microsoft Dynamics 365 licence), with the ability to browse a knowledge-base of articles, leave comments or even join a community forum.

Event Management Portal

Effectively manage event logistics, finances, speakers, sponsors and attendees and gain valuable post-event feedback with integrated surveys using a specifically designed Event Management Portals, linked to Dynamics 365 for Marketing.

Power Apps Portals

With Power Apps Portals, you can quickly build out tailored login areas which are tightly integrated with the Power Platform. Users log in to their Portal and see data you have chosen to expose to them, with the option to add or edit data entirely within your control.

One unified Microsoft solution

Microsoft Dynamics 365, the Power Platform and Azure Data services seamlessly integrate to make your business more productive, efficient and connected. Accelerate user adoption, democratise data and lower training time with a familiar and seamless user experience across Microsoft applications.
